Souvik Ghosh

Kolkata souvikghosh6392@gmail.com 7003058672 souvikghosh19 souvikofficial

Objective

Full-stack developer specializing in the MERN stack, with strong skills in Python, SQL, and data visualization (Power BI) . Experienced in data analysis using Pandas and building scalable real-time applications with React, Flask, and Socket.IO. Active community leader at Apex Circle (4,000+ members), organizing tech initiatives and a national hackathon with 3,500+ applicants.

Education

Indian Institute of Technology Madras *Expected Graduation: 2028*
BS in Data Science

- **Coursework:** Statistics, Python Programming, Vue.js, flask, ML, Buissness Analytics

Technologies

Languages: Python, JavaScript, SQL, Shell, C/C++

Frontend: React.js, Typescript.js,Next.js, Vue.js, HTML, CSS

Backend : Node.js, Nest.js, Flask, FastAPI

Databases and Caching: MongoDB , MySQL , PostgreSQL, Redis

Tools: Git, Power BI

Version Control: Git, GitHub

Experience

Flostat — Frontend Developer Intern
September 2025 - December 2025

- Developed **Flostat's internal dashboard application**, a centralized platform for real-time IoT device monitoring and control
- Built a **real-time data pipeline UI** using React + TypeScript, enabling continuous visualization of live device streams
- Integrated **MQTT and REST APIs** to handle low-latency, event-driven data updates
- Transformed product wireframes into **modular, reusable component architecture**, improving scalability and maintainability

Projects

Placement Portal App

- Developed a Placement Portal Application using Vue.js, Flask, SQLite, Redis, and Celery, featuring role-based access for students, companies, and administrators, placement drive management, application tracking, caching, and asynchronous background tasks.

Real-Time Location Tracker App

- Developed an app enabling users to share and track live geographic locations via a web interface.
- Technologies Used: Express.js, HTML, CSS, WebSocket, JavaScript. Real-time Communication: Implemented WebSocket for seamless updates

Web Scraper

- Developed Python tool supporting multiple scraping approaches: auto-detection, manual CSS selectors, and table parsing using BeautifulSoup/Selenium. Implemented Tor proxy support, user-agent rotation, pagination handling, and infinite scroll for comprehensive data extraction
- Built-in data cleaning and multi-format export (CSV/Excel/JSON) with duplicate removal functionality. Supports both static sites (requests) and JavaScript-heavy sites (Selenium WebDriver) with configurable scraping parameters
